

Celloprimer S

(Provisional)

Description

CELLOPRIMER S is a primer for cellophane films.

Application

CELLOPRIMER S is used to bond the adhesive mass (based on natural or synthetic rubber) to the film, without activation or film pre-treatment.

It can be used for PSA films, for packaging or technical uses.

Technical Specifications

Method of analysis	MU	Standard
1. Total Solids Solvents	%	9±1 ethylacetate

Handling

CELLOPRIMER S must be cured with 1 - 1,5% of CURING AGENT D before coating.

The pot-life is reduced as crosslinking starts immediately after the addition of the curing agent and depends on the amount of crosslinker and on the temperature.

Dilution: the product can be diluted with ethyl acetate.

Recommended coating weight: 1,0 - 1,5 g/sqm dry.

Packaging

The product is supplied in Iron drums (20 kg); iron drums (180 kg).

Storing

Store at temperatures between +10 and +40°C, keep container well closed to prevent solvent

evaporation.

Stir well before use.

Use within 12 months from production date (unopened and in the original packaging).
